

The figure displays three box plots side-by-side, representing the distribution of 'number' for three categories: 'none' (red), 'small' (blue), and 'big' (yellow). The y-axis is labeled 'number' and ranges from 0 to 120. Each box plot shows the median (horizontal line inside the box), the interquartile range (the box itself), and the range of the data (whiskers). Outliers are plotted as individual points beyond the whiskers.

- none (red):** The median is approximately 10. The interquartile range is from about 5 to 25. The whiskers extend from about 0 to 40. There are several outliers, with the highest reaching nearly 100.
- small (blue):** The median is approximately 10. The interquartile range is from about 5 to 25. The whiskers extend from about 0 to 20. There are several outliers, with the highest reaching about 25.
- big (yellow):** The median is approximately 10. The interquartile range is from about 5 to 15. The whiskers extend from about 0 to 15. There are several outliers, with the highest reaching about 15.
