

The figure displays three box plots side-by-side, representing the distribution of the variable 'number' for three categories: 'none' (red), 'small' (blue), and 'big' (yellow). The y-axis represents the 'number' values, ranging from 0 to 100. Each box plot shows the median (horizontal line inside the box), the interquartile range (the box itself), and the range of the data (the whiskers). Outliers are plotted as individual points above or below the whiskers.

- Category 'none' (red):** The median is approximately 35. The interquartile range is from about 15 to 55. The whiskers extend from approximately 0 to 85. There are several outliers above the upper whisker, with values around 85, 90, and 95.
- Category 'small' (blue):** The median is approximately 45. The interquartile range is from about 35 to 60. The whiskers extend from approximately 10 to 85. There are several outliers above the upper whisker, with values around 85, 90, and 95.
- Category 'big' (yellow):** The median is approximately 55. The interquartile range is from about 45 to 70. The whiskers extend from approximately 30 to 75. There are a few outliers above the upper whisker, with values around 75, 80, and 85.
