

The figure displays two boxplots side-by-side, representing the distribution of the number of children per woman for the 1950s (left, pink) and 1960s (right, blue). The y-axis is labeled 'Number of children per woman' and ranges from 0 to 10. The 1950s distribution is highly skewed to the right, with a median around 2.5 and a long tail extending up to 10. The 1960s distribution is also skewed to the right but less so, with a median around 2.5 and a tail extending up to 5. A horizontal line with an orange dot at the center represents the overall mean, which is slightly above 2.5.
