

The figure displays three box plots side-by-side, representing the distribution of the variable 'number' for three categories: 'none' (red), 'small' (blue), and 'big' (yellow). The y-axis represents the 'number' values, ranging from 0 to 100. Each box plot includes a median line, a box representing the interquartile range (IQR), and whiskers extending to the minimum and maximum values. Individual data points are overlaid on the box plots.

- Category 'none' (red):** The median is approximately 25. The IQR is from about 10 to 40. The whiskers extend from about 0 to 60. There are several outliers above the upper whisker, with values around 70, 75, and 85.
- Category 'small' (blue):** The median is approximately 20. The IQR is from about 10 to 30. The whiskers extend from about 0 to 50. There are several outliers above the upper whisker, with values around 55, 60, and 65.
- Category 'big' (yellow):** The median is approximately 15. The IQR is from about 5 to 25. The whiskers extend from about 0 to 30. There are a few outliers above the upper whisker, with values around 35, 40, and 45.
