

The figure displays three box plots side-by-side, representing the distribution of the variable 'number' for three categories: 'none' (red), 'small' (blue), and 'big' (yellow). The y-axis represents the 'number' values, ranging from 0 to 100. Each box plot includes a box representing the interquartile range (IQR), a horizontal line for the median, and whiskers extending to the minimum and maximum values within 1.5 times the IQR. Outliers are plotted as individual points beyond the whiskers.

- Category 'none' (red):** The median is approximately 25. The IQR spans from about 10 to 40. There are numerous outliers, with several points reaching up to 100.
- Category 'small' (blue):** The median is approximately 35. The IQR spans from about 20 to 50. There are several outliers, with one point reaching up to 70.
- Category 'big' (yellow):** The median is approximately 45. The IQR spans from about 30 to 55. There are no outliers for this category.
