

The figure displays three box plots side-by-side, each representing a different data distribution. The red box plot on the left shows a wide spread of data points with a median around 40. The blue box plot in the center shows a similar spread but with a higher median around 55. The orange box plot on the right shows a much narrower distribution with a median around 65. All three plots include individual data points overlaid on the box plots, with whiskers extending to the minimum and maximum values.
